

Biological transmutation and Homeopathy

Variations in vital heat: endothermal and exothermal reactions

Have you ever encountered a Camphora or Carbo-animalis patient and was amazed at the coldness of his body, including his breath? Or a Belladonna or Sulphur patient who's burning face could be felt even without touch, a few centimeters away? Can these phenomena be explained solely on blood circulation modifications or there is something else? Finally, scientists might have found the answer, a discovery capable of changing dramatically our understanding on life processes. It can also be an important piece of the puzzle on understanding the effect of homeopathic remedy on the physical body, right at the cellular level. It is called "biological transmutation", the transmutation of elements in human body which can be observed under these conditions (low energy transmutations) only within living things, another of Life's miracles.

Long before the discovery of "cold fusion" by Pons and Fleischman, other scientists had variously found phenomenal evidence of non-radioactive, low-energy transmutation of light elements in plant, animals and minerals. Louis Kervran (Univ. of Paris) was the most ardent researcher of biological transmutation, and his work in the field earned him a nomination for the Nobel Prize. Kervran elucidated several of these nuclear reactions and verified them: These reactions have come to be known as "biological transmutations" or "nuclido-biological reactions". This class of nuclear reactions is of great importance to the progress of human knowledge in the fields of physics, cosmology, biology, geology, ecology, medicine, nutrition and agriculture. The exact mechanisms of biological transmutations remain unknown, though a few theories have been proposed to explain them. Biological transmutations exist and cannot be denied; they are the very core of living nature, which could not function without them.

There are two types of transmuting reactions, depending on the direction of process. The endothermal reactions are observed when simpler elements are transmuted into more complex ones. Some of the electrons which begin at a lower energy state (closer to the nucleus) are moving further out to higher energy states with an input of energy which is drawn from the surrounding area. When a person undergoes an endothermal reaction, he usually feels cold in some part of all of his body. This cold may be quite extreme; in an extremely hot room he may shiver despite being covered by many blankets. It is what we call in homeopathy, "lack of vital heat"; the vital heat is consumed by this type of reactions. In extreme cases, this coldness can be felt at a certain distance from that person.

The exothermal reactions are observed when more complex elements are transmuted into simple ones; some electrons which begin at a higher energy state (away from the nucleus) are moving closer in to lower energy states, therefore an output of energy is produced and heat is experienced by the person, in part or whole of his body. The person also feels hot to the touch and in extreme cases the heat can be felt a few centimeters away from the patient (Kent writes that you can sometimes feel the Belladonna heat from a distance of 20 cm)

There are a number of factors that are necessary to occur. One of them is proper nutrition, the presence of certain enzymes and hormones. Most certainly these type of processes can be influenced by the administration of a homeopathic remedy and can explain the sometime almost instant modifications experienced by the patient in some cases after the administration of the correct remedy in the correct dilution.

Correcting mineral deficiencies

Addressing mineral deficiencies with supplementation becomes greatly complicated when biological transmutation gets figured into the equation. Kervran's work warns against supplementing certain minerals as the body may transmute them causing an even greater imbalance. We assume that a mineral deficiency is due to low intake of that mineral. The truth might be that in most of the cases it is due to an underlying hormone or energy imbalance that has skewed the body's transmutation process, and this can be corrected through homeopathy.

For example biological transmutations can be used to improve the healing of bone fractures. The time of healing is quicker after administration of organic silica extracts obtain from horsetail, than after giving calcium. In effect, in order to get better recalcification, mineral calcium should not be administered; instead, conditions must be established for the 'manufacture' of calcium by an organism.

High potency remedies have the ability to change the balance of chemistry of minerals within the body.

Below are a few examples:

- in children who cannot assimilate calcium and their relative chemistry is disturbed, once they will take the Calc-carb in high potency the calcium absorption is restored instantly.
- the same process can be observed for Silica deficient children after the administration of Silica in high potency, the dry brittle hair, brittle fingernails and toenails, poor skin quality come back to normal
- mental exhaustion is frequently corrected by the use of homeopathic dilutions of Kalium-phosphoricum or Phosphoric acid, possibly by increasing the phosphor intake by the phosphor depleted neurons
- the administration of Magnesia Phosphorica in certain types of trigeminal neuralgia or menstrual cramps can bring instant relief, perhaps by increasing the intake of existing magnesium or instantly transmuting other elements into Magnesium ("nature's relaxing agent")

Modern findings to support biological transmutation

In 1978 Solomon Goldfein of the US Army's Material Laboratory at Fort Belvoir suggested a possible mechanism for biological transmutations. He suggests that such transmutations would most likely involve an organic molecule with a central metal atom: Magnesium Adenosine Triphosphate (or Mg-ATP). Goldfein says that a stack of these molecule could form a helical chain. The Mg-ATP could also produce oscillating electric currents which act as a microminiature cyclotron, accelerating hydrogen ions to speeds near that of light and giving them enough potential to transmute an element to the next higher number in the table of elements.

Pappas and the transmutation of Na to K.

In 1998, Prof. Pappas from Athens published an article suggesting that biological transmutation occurs as a form of cold fusion in the cellular membrane sodium–potassium pump. According to Pappas, "the ions are not pumped back and forth through the membrane, but instead transmute back and forth between Na and K". Our intuition tells us that there might be other couples of elements might behave in a similar manner, for example the Ca / Mg couple. Their precise balance on a cellular level is critical as they are, like Na and K, the opposite sides of a coin: Ca increases nerve excitability while Mg has the opposite effect; Ca makes muscles contract, Mg is necessary for muscles to relax; Ca is needed for blood clotting, but Mg keeps the blood flowing freely. Another couple is Copper/Zinc. Zinc has an inverse relationship with copper in the body. This means that as zinc goes down, copper goes up and vice versa.

Hahnemann and Paracelsus

Transmutation of elements was one of the main interests of Paracelsus. It is interesting to know why Hahnemann never mentioned Paracelsus in his writings. Although Hahnemann denied any association with Alchemy and persistently denied that he had copied Paracelsus or borrowed anything from him in the formulation of homeopathy, nevertheless, there do remain some baffling aspects about homeopathy which can probably best be contextualised by assuming some form an underlying link to alchemy, and with which we can safely assume he must have been familiar, both from his early travels and teachings in Transylvania [with von Bruckenthal] and also from his vast reading of medical history. Clear evidence of Hahnemann's detailed knowledge of alchemical techniques lies scattered here and there throughout his writings, especially in his mode of preparation of certain remedies. Though Hahnemann may not have intended to carry into his new system any of the ideas of alchemy, there seems little doubt that several of its techniques did get carried in, intentionally or otherwise. Indeed, he seems to have taken many of the techniques of alchemy, dumped the theories and used the techniques to prepare his new remedies, chosen on the basis of the law of similars.

Sun-gazing and biological transmutation

Sun-gazing is a method in which a person can acquire all the structural and functional elements needed by the body through gazing at the rising or setting sun. They experience a reduction in their appetite/less hunger. Some are able to subsist more and more on light as they expand their practice of sun-gazing, from days, weeks, or even months at a time without eating regular food and/or no food. The explanation consists in either directly transforming the energy from the sun into biological available energy (ATP), or by transmuting (currently not detected) elements existing in mono-atomic state in atmosphere, into more complex elements required by the human body, or both.

Homeopathy and restoring the "vibration of life"

Leaving aside the tremendous importance on the biological transmutation produced by the correct remedy and its direct influence on the physical body, one must be aware that the effect of the similia in a high potency within an organism who has the need for a specific information carried by such a remedy creates a much bigger global phenomenon than a one sided simple transmutation of some minerals. It restores the organism to the "vibration of life".

Even though the official medicine is still being conducted by materialistic laws, both medical practitioners and patients become more and more aware that physical illness follows and is a direct consequence of the mental and spiritual illness. In Greek language the word for "sin" is "amartia" and it means away from the target, away from the right path. It can mean also away from the right frequency, the frequency of Life.

As with sun-gazers who derive the majority of their energy directly from the sun while completely abstaining from the normal metabolic consumption of food, the spiritual men derive the majority of their energy directly from the Source of All Life, while completely abstaining from the normal metabolic consumption of food.

"It is written: 'Man shall not live on bread alone, but on every word that comes from the mouth of God.'"

Homeopathy has therefore the noble mission of bringing back human kind to its true nature, to his Creator.

"In the healthy condition of man, the spiritual vital force, the dynamis that animates the material body, rules with unbounded sway, and retains all the parts of the organism in admirable, harmonious, vital operation, as regards both sensations and functions, so that our indwelling, reason-gifted mind can freely employ this living, healthy instrument for the higher purposes of our existence.
